Picturing the Western Front Beatriz Pichel 2021-05-18 Between 1914 and 1918, military, press and amateur photographers produced thousands of pictures. Either classified in military archives specially created with this purpose in 1915, collected in personal albums or circulated in illustrated magazines, photographs were supposed to tell the story of the war. *Picturing the Western Front* argues that photographic practices also shaped combatants and civilians' war experiences. Doing photography (taking pictures, posing for them, exhibiting, cataloguing and

looking at them) allowed combatants and civilians to make sense of what they were living through. Photography mattered because it enabled combatants and civilians to record events, establish or reinforce bonds with one another, represent bodies, place people and events in imaginative geographies and making things visible, while making others, such as suicide, invisible. Photographic practices became, thus, frames of experience.

Rethinking Online Education Bessie Mitsikopoulou 2015-11-17 "Rethinking Online Education" analyzes online educational materials on the recent Iraq war aimed to be used by U.S. educators in elementary and secondary schools. It is suggested that far from being ideologically neutral, these educational materials weave together resources which provide a coherent view of the Iraq war theme, and can thus be seen as constituting a kind of an informal curriculum. Mitsikopoulou argues that the teacher resources adhere to different pedagogical discourses and constitute materializations of two broad approaches to education. A number of pedagogical issues are also raised in the discussion: What is the difference between critical thinking and critical pedagogy? How is the genre of lesson plan realized in different teaching philosophies and how do curricular texts change when they are delivered online? This important book highlights the need to explore the new forms of textuality which emerge from online curricular materials and to develop an understanding of the processes of text composition, distribution and consumption.

Filming History from Below Efrén Cuevas 2022-01-11 Traditional historical documentaries strive to project a sense of objectivity, producing a top-down view of history that focuses on public events and personalities. In recent decades, in line with historiographical trends advocating "history from below," a different type of historical documentary has emerged, focusing on tightly circumscribed subjects, personal archives, and first-person perspectives. Efrén Cuevas categorizes these films as "microhistorical documentaries" and examines how they push cinema's capacity as a producer of historical knowledge in new directions. Cuevas pinpoints the key features of these documentaries, identifying their parallels with written microhistory: a reduced scale of observation, a central role given to human agency, a conjectural approach to the use of archival sources, and a reliance on narrative structures. Microhistorical documentaries also use tools specific to film to underscore the affective dimension of historical narratives, often incorporating autobiographical and essayistic

perspectives, and highlighting the role of the protagonists' personal memories in the reconstruction of the past. These films generally draw from family archives, with an emphasis on snapshots and home movies. Filming History from Below examines works including Péter Forgács's films dealing with the Holocaust such as *The Maelstrom* and *Free Fall*; documentaries about the Israeli-Palestinian conflict; Rithy Panh's work on the Cambodian genocide; films about the internment of Japanese Americans during the Second World War such as *A Family Gathering* and *History and Memory*; and Jonas Mekas's chronicle of migration in his diary film *Lost, Lost, Lost*.

Sveti Pavao Shipwreck Carlo Beltrame 2014-07-31 Between 2007 and 2012 the Department for Underwater Archaeology of the Croatian Conservation Institute from Zagreb and the Department of Humanistic Studies of the Ca' Foscari University of Venice collaborated in the recording, underwater excavation and analysis of the unusually well-preserved wreck of a 16th century Venetian merchantman in the Sveti Pavao shallow off the southern shore of the island of Mljet, Croatia. The shipwreck preserved many personal possessions of the crew as well as a number of bronze artillery pieces and the remains of a cargo of luxury and richly decorated ceramic material from Iznik and other oriental workshops. Although the excavation is not complete, this volume presents the results of the project so far. The methodological and technical aspects of the underwater investigation of the site, mainly by photogrammetry, are described; the historical and archaeological context of navigation in the late Medieval period in the eastern Mediterranean discussed; and the recovered artefacts described and catalogued in detail, together with the remains of the ship and its equipment that, because of depth and of problems of conservation, have been left in situ. The conservation and restoration of the finds are described in an appendix.

Employ Groovy mark-up and builders to simplify application development Familiarize yourself with Groovy mark-up and build your own Groovy builders Build effective DSLs with operator overloading, command chains, builders, and a host of other Groovy language features
Integrate Groovy with your Java and JVM based applications In Detail The times when developing on the JVM meant you were a Java programmer have long passed. The JVM is now firmly established as a polyglot development environment with many projects opting for alternative development languages to Java such as Groovy, Scala, Clojure, and JRuby. In this pantheon of development languages, Groovy stands out for its excellent DSL enabling features which allows it to be manipulated to produce mini languages that are tailored to a project's needs. A comprehensive tutorial on designing and developing mini Groovy based Domain Specific Languages, this book will guide you through the development of several mini DSLs that will help you gain all the skills needed to develop your own Groovy based DSLs with confidence and ease. Starting with the bare basics, this book will focus on how Groovy can be used to construct domain specific mini languages, and will go through the more complex meta-programming features of Groovy, including using the Abstract Syntax Tree (AST). Practical examples are used throughout this book to de-mystify these seemingly complex language features and to show how they can be used to create simple and elegant DSLs. Packed with examples, including several fully worked DSLs, this book will serve as a springboard for developing your own DSLs. Style and approach This book is a hands-on guide that will walk you through examples for building DSLs with Groovy rather than just talking about "metaprogramming with Groovy". The examples in this book have been designed to help you gain a good working knowledge of the techniques involved and apply these to producing your own Groovy based DSLs.

Category Theory for the Sciences David I. Spivak 2014-10-17 An introduction to category theory as a rigorous, flexible, and coherent modeling language that can be used across the sciences. Category theory was invented in the 1940s to unify and synthesize different areas in mathematics, and it has proven remarkably successful in enabling powerful communication between disparate fields and subfields within mathematics. This book shows that category theory can be useful outside of mathematics as a rigorous, flexible, and coherent modeling language throughout the sciences. Information is inherently dynamic; the same ideas can be organized and reorganized in countless ways, and the ability to translate between such organizational structures is becoming increasingly important in the sciences. Category theory offers a unifying framework for information modeling that can facilitate the translation of knowledge between disciplines. Written in an engaging and straightforward style, and assuming little background in mathematics, the book is rigorous but accessible to non-mathematicians. Using databases as an entry to category theory, it begins with sets and functions, then introduces the reader to notions that are fundamental in mathematics: monoids, groups, orders, and graphs—categories in disguise. After explaining the “big three” concepts of

category theory—categories, functors, and natural transformations—the book covers other topics, including limits, colimits, functor categories, sheaves, monads, and operads. The book explains category theory by examples and exercises rather than focusing on theorems and proofs. It includes more than 300 exercises, with solutions. *Category Theory for the Sciences* is intended to create a bridge between the vast array of mathematical concepts used by mathematicians and the models and frameworks of such scientific disciplines as computation, neuroscience, and physics.

Chinese Civil Justice, Past and Present Philip C. Huang 2010 The culmination of twenty years of research, this essential book completes distinguished historian Philip C. C. Huang's pathbreaking trilogy on Chinese law and society from late imperial times to the present. Huang shows how, at the level of ideology and theory, traditional Chinese law has been rejected time and again in the past century by China's own lawmakers, first in the late Qing and the republic, then in the revolutionary and Maoist periods of the People's Republic, and finally again in the current reform era. Considering legal theory alone, modern Chinese law can only be Western law, and past Chinese law-traditional or Maoist-can have no role under the leadership's current preoccupations with modernization and marketization. But what has actually happened historically at the level of judicial practice and the daily lives of common people? In exploring this central question, Huang draws on a rich array of court records and field interviews to illustrate the surprising strength of traditional Chinese civil justice. Albeit much altered, its legacy can be traced in informal and semiformal community justice (e.g., societal and cadres mediation), as well as in multiple spheres of court-administered formal civil justice, including property rights, inheritance and old-age maintenance, and debt obligations. He also identifies the influence of Maoist justice, especially its divorce and civil court mediation practices. Finally, despite the reform era's massive importation of Western laws, legal reasoning employed in judicial practice has shown remarkable continuity, with major implications for China's future legal system.

International Relations and the Arctic: Understanding Policy and Governance Robert W. Murray 2014-06-26 Increased global interest in the Arctic poses challenges to contemporary

international relations and many questions surround exactly why and how Arctic countries are asserting their influence and claims over their northern reaches and why and how non-Arctic states are turning their attention to the region. Despite the inescapable reality in the growth of interest in the Arctic, relatively little analysis on the international relations aspects of such interest has been done. Traditionally, international relations studies are focused on particular aspects of Arctic relations, but to date there has been no comprehensive effort to explain the region as a whole. Literature on Arctic politics is mostly dedicated to issues such as development, the environment and climate change, or indigenous populations. International relations, traditionally interested in national and international security, has been mostly silent in its engagement with Arctic politics. Essential concepts such as security, sovereignty, institutions, and norms are all key aspects of what is transpiring in the Arctic, and deserve to be explained in order to better comprehend exactly why the Arctic is of such interest. The sheer number of states and organizations currently involved in Arctic international relations make the region a prime case study for scholars, policymakers and interested observers. In this first systematic study of Arctic international relations, Robert W. Murray and Anita Dey Nuttall have brought together a group of the world's leading experts in Arctic affairs to demonstrate the multifaceted and essential nature of circumpolar politics. This book is core reading for political scientists, historians, anthropologists, geographers and any other observer interested in the politics of the Arctic region.

The Routledge Companion to Indigenous Repatriation Cressida Fforde 2020-03-05 This volume brings together Indigenous and non-Indigenous repatriation practitioners and researchers to provide the reader with an international overview of the removal and return of Ancestral Remains. The Ancestral Remains of Indigenous peoples are today housed in museums and other collecting institutions globally. They were taken from anywhere the deceased can be found, and their removal occurred within a context of deep power imbalance within a colonial project that had a lasting effect on Indigenous peoples worldwide. Through the efforts of First Nations campaigners, many have returned home. However, a large number are still retained. In many countries, the repatriation issue has driven a profound change in the relationship between Indigenous peoples and collecting institutions. It has enabled significant steps towards resetting this relationship from one constrained by colonisation to one that seeks a more just, dignified and truthful basis for interaction. The history of repatriation is one of Indigenous perseverance and success. The authors of this book contribute major new work and explore new facets of this global movement. They reflect on nearly 40 years of repatriation, its meaning and value, impact and effect. This book is an invaluable contribution to repatriation practice and research, providing a wealth of new knowledge to readers with interests in Indigenous histories, self-determination and the relationship between collecting institutions and Indigenous peoples.

Raymond Roussel and the Republic of Dreams Mark Ford 2019-01-24 Raymond Roussel, one of the most outlandishly compelling literary figures of modern times, died in mysterious circumstances at the age of fifty-six in 1933. The story Mark Ford tells about Roussel's life and work is at once captivating, heartbreaking, and almost beyond belief. Could even Proust or Nabokov have invented a character as strange and memorable as the exquisite dandy and graphomaniac this book brings to life? Roussel's poetry, novels, and plays influenced the work of many well-known writers and artists: Jean Cocteau found in him "genius in its pure state," while Salvador Dalí, who died with a copy of Roussel's *Impressions d'Afrique* on his bedside table, believed him to be one of France's greatest writers ever. Edmond Rostand, Marcel

Duchamp, André Breton, Michel Foucault, and Alain Robbe-Grillet all testified to the power of his unique imagination. By any standards, Roussel led an extraordinary life. Tremendously wealthy, he took two world tours during which he hardly left his hotel rooms. He never wore his clothes more than twice, and generally avoided conversation because he dreaded that it might turn morbid. Ford, himself a poet, traces the evolution of Roussel's bizarre compositional methods and describes the idiosyncrasies of a life structured as obsessively as Roussel structured his writing.

Religion in the Soviet Union F. Corley 1996-08-27 The Soviet government's attitude to religion in theory and practice is shown in this wide-ranging collection of annotated texts from the newly-opened archives. Included are documents from the KGB, the Central Committee, the Council for Religious Affairs and numerous other official bodies. For the first time in English we see the bureaucrats' own view of how religious believers should be controlled, following the story from the persecutions of the early Soviet years to the openness instituted by Mikhail Gorbachev.

New Literary Hybrids in the Age of Multimedia Expression Marcel Cornis-Pope 2014-11-15 Begun in 2010 as part of the "Histories of Literatures in European Languages" series sponsored by the International Comparative Literature Association, the current project on New Literary Hybrids in the Age of Multimedia Expression recognizes the global shift toward the visual and the virtual in all areas of textuality: the printed, verbal text is increasingly joined with the visual, often electronic, text. This shift has opened up new domains of human achievement in art and culture. The international roster of 24 contributors to this volume pursue a broad range of issues under four sets of questions that allow a larger conversation to emerge, both inside the volume's sections and between them. The four sections cover, 1) Multimedia Productions in Theoretical and Historical Perspective; 2) Regional and Intercultural Projects; 3) Forms and Genres; and, 4) Readers and Rewriters in Multimedia Environments. The essays included in this volume are examples of the kinds of projects and inquiries that have become possible at the interface between literature and other media, new and old. They emphasize the extent to which hypertextual, multimedia, and virtual reality technologies have enhanced the sociality of reading and writing, enabling more people to interact than ever before. At the same time, however, they warn that, as long as these technologies are used to reinforce old habits of reading/ writing, they will deliver modest results. One of the major tasks pursued by the contributors to this volume is to integrate literature in the global informational environment where it can function as an imaginative partner, teaching its interpretive competencies to other components of the cultural landscape.

Asian Countries and the Arctic Future Leiv Lunde 2015-08-28 Over the last few years Asian governments have taken a stronger approach to the Arctic, culminating with permanent-observer status to the Arctic Council for China, India, Japan, Singapore and South-Korea in May 2013. This groundbreaking book brings together the latest research in emerging Asian interests for the Arctic region, and the implications thereof this change has for the future. This

book covers Arctic shipping, fisheries and mineral extraction. It analyzes key Asian countries' policies, positions and activities. The book also demonstrates that there are common aspects which attract Asian countries to the Arctic, such as a concern for climate change, but there are also important national differences. From the Arctic Council to UNCLOS, Arctic governance mechanisms are thoroughly presented and analyzed. Contributed by scholars from both Asia — China, India, Japan, Singapore and South-Korea — as well as Arctic countries — Norway and USA, this book is an essential source of reference for both academics and government professionals, as well for the readers keen on understanding the dynamic change in the Arctic region.

Opium and the Limits of Empire David Anthony Bello 2005 This book examines the Chinese opium crisis from the perspective of Qing prohibition efforts. The author argues that opium prohibition, and not the opium wars, was genuinely imperial in scale and is hence much more representative of the actual drug problem faced by Qing administrators.

The High North Ryszard M. Czarny 2015-08-06 This book deals with the transformation of the Arctic from an isolated or a distant region to a member of the global community, vulnerable to global changes, and an area frequently in the very center of the world's attention. Increased global interest is a potential source of tensions between the need for exploration or exploitation, and the requirements of protection. This context calls for new data, knowledge and information vital for a better understanding of interactions between different systems, as well as developing awareness about the current and potential changes in the future. The objective of the book is to help develop a strategy of adaptation to climate change based on the knowledge and experience of the extremely effective mechanisms which for centuries made survival possible in this region.

Against the Tide Martín López Corredoira 2008 Nobody should have a monopoly of the truth in this universe. The censorship and suppression of challenging ideas against the tide of mainstream research, the blacklisting of scientists, for instance, is neither the best way to do and filter science, nor to promote progress in the human knowledge. The removal of good and novel ideas from the scientific stage is very detrimental to the pursuit of the truth. There are

instances in which a mere unqualified belief can occasionally be converted into a generally accepted scientific theory through the screening action of refereed literature and meetings planned by the scientific organizing committees and through the distribution of funds controlled by "club opinions". It leads to unitary paradigms and unitary thinking not necessarily associated to the unique truth. This is the topic of this book: to critically analyze the problems of the official (and sometimes illicit) mechanisms under which current science (physics and astronomy in particular) is being administered and filtered today, along with the onerous consequences these mechanisms have on all of us. Apart from the editors, Juan Miguel Campanario, Brian Martin, Wolfgang Kundt, J. Marvin Herndon, Marian Apostol, Halton C. Arp, Tom Van Flandern, Andrei P. Kirilyuk, Dmitri Rabounski and Henry H. Bauer, all of them professional researchers, reveal a pessimistic view of the miseries of the actual system, while a glimmer of hope remains in the "leitmotiv" claim towards the freedom in doing research and attaining an acceptable level of ethics in science.
